

Trading Capital 100K. Risk is 1% of Capital per trade (raised from 0.5) Positions will be added to, (pyramided) if they rise 1 ATR from entry price. The objective is to start with about 20 positions cutting that down to 10 or 12 by selling losers and pyramiding winners.

The BEAR FILTER is ALWAYS used to determine sells. This system uses a less stringent bull filter than the one I teach, but a filter is still used. MLX was a stock that did not meet the criteria of the Castle 24/6 Bull filter, but it did meet the criteria and rules of my system.

NOTE: FROM THIS POINT ON I HAVE CHANGED MY SYSTEM FROM THE RULES STATED ON PAGE ONE.

I HAVE CHANGED POSITION SIZING AND THE EXIT.

I WILL CONTINUE TO PYRAMID BUT USE DIFFERENT CALCULATIONS AND RULES TO BUY THE 2ND POSITION.

SOME 2ND POSITIONS WILL BE PURCHASED AS A STAND ALONE BUY IF I DID NOT HAVE FUNDS TO BUY THE FIRST POSITION AT THE TIME.

THESE RULES WILL BE EXPLAINED IN FULL WHEN I HAVE TRADED IT A WHILE USING LIVE MONEY, TO VALIDATE THE EXTENSIVE RESEARCH AND DEVELOPMENT WORK.
