Total					22,866.48	-6,079.47	-21.003

Cash held	199,443
Trading profit (current)	-6,079
Add Dividends Received	14,236
Less brokerage	2,361
Total value adding portfolio value, cash and dividends, and minus brokerage is:	234,184

Note: this system is different to the eBook system, please read carefully.

This system uses the 52 week high signal as its primary entry, in conjunction with a Bull filter.

The Bull filter rule is the weekly close of the XMD must be above the 24 EMA and the 6EMA. This is a slower more conservative filter than the eBook Bull filter, it is not a "better" filter but one I have been using for many years and it suits my objective. It was designed to be used in conjunction with a Bear filter, which I no longer use.

The 52 week high entry is used in conjunction with a momentum filter. The momentum filter measures stock speed, so some 52 week high signals will not be bought until the stock meets the momentum criteria.

An example of this can be seen below with the stock DDR.

Pullback entry: Rarely, some stocks are bought on a pullback from the 52 week high entry. Pullback entries normally happen when the market falls, some stocks never pullback after the original 52 week high signal. Pullbacks are bought only if it happens and if the portfolio has the cash to buy, which often it does not. The pullback entry does not make more profit for the system, however it can smooth the equity curve.

Examples of pullback entries can be seen in some charts displayed below.

Sizing: this system uses ATR sizing not percent of equity sizing like the eBook does.

There is no "better" sizing method. ATR sizing is my preference and suits my objective.

System exit: the exit is the same as the eBook system.

Variables within a system do not "make" a system or create outperformance.

What gives good results is discipline, sticking to a system for a period of time to test the rules as well as the operators performance, the most important factor.

Stock List: stocks to buy are sourced using my fundamental "Castle" criteria scan.

Information such as ATR sizing, dip buy rules, profit preserve sells, momentum criteria and the Castle stock selection criteria is withheld in this PDF file and provided to private clients only.

Trades this week:

ALK were sold at 0.625 raising 8,312

APD were sold at 0.555 raising 7,770

AEF were sold at 2.90 raising 11,945

ADH were sold at 1.40 raising 7,014

BRG were sold at 15.53 raising 4,861

CCL were sold at 10.45 raising 8,956

CDA were sold at 5.71 raising 6,852

EAS (4000) were sold at 0.75 raising 3,000

HIT were sold at 1.03 raising 3,649

IDX were sold at 3.45 raising 10,178

MIN were sold 13.63 at raising 10,223

MNY were sold at 1.75 raising 4,879

PBP were sold at 1.90 raising 11,400

PNI were sold at 3.21 raising 5,056

PPH were sold at 3.17 raising 11,856

PRU were sold at 0.855 raising 6,156

SDI were sold at 0.78 raising 11,239

TPM were sold at 7.56 raising 10,138

Total capital raised 143,484. Add capital from last week and cash is 199,443

Notes: I did the best I could to sell at reasonable prices. It was difficult.

The 3 stocks I am holding should be sold too, but due to very low offer of bids

I decided to hold them and hopefully exit at a better price.

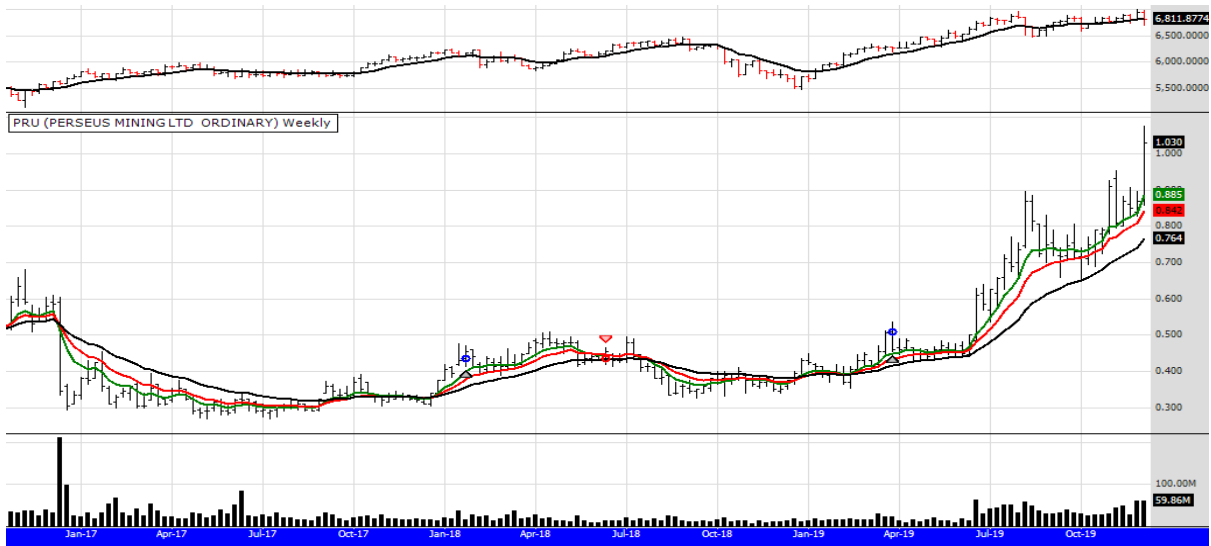

Some stocks did not get a sell signal, they were ALK, APD, BRG, IDX, TPM.

However they have all signaled a sell now as of Wed 18/3/20

I sold to raise capital, particularly considering the above stocks I got stuck in.

So, its been a tough time. I hope you are faring ok.

No dividends this week

After a trade in Jan 18 and a break even result, PRU signaled again in the eBook system in April 2019. Something I rarely do is buy an open trade, particularly one that is up 100%. The stock also does not meet my fundamental criteria. However, I have small exposure to the gold market and PRU is one of the few gold stocks in a strong uptrend, so the trade has been bought and the size of the trade determined by the stocks volatility, which as you can see is quite significant. The small chart above the stock price chart is a graph of the XAO.

Pull back entry rule example.

TGR is an example of the pullback entry rule.

TGR signalled the 52 week closing high but went sideways and then dipped a little, meeting the rules of the dip buy and so the 2nd position was bought.

The chart above shows DDR signalling a buy in the eBook system, the buy price was 3.24
The chart below shows DDR signalling the same buy but using a momentum filter, you can see the buy was delayed and bought even higher than the original 52 week high signal. In this case, using the momentum filter, the stock was bought at 3.42

A2M signalled a 52 week closing high in late Feb. The stock rose but has now fallen and pulled back below the original buy price. The trade is still "open" as the exit signal has not been triggered. The stock currently meets the rules for a "dip buy" and a second position has been purchased at the open on Tuesday the 11th June (the 10th was a public holiday)
 Note: this stock was stopped out only 2 weeks later on the 24th June.

The stock above shows CHC being sold at a "Profit Preserve" signal. Profit Preserve signals are taught to clients in my coaching sessions or at my courses.

EOS is an open trade in the eBook system. I use a profit preserve signal (taught to clients) and the stock was sold back in Nov 2019. Using that exit means the stock has re signaled a buy last week, I bought the stock on Monday 13th Jan 2020
 Note: if you bought the trade using the eBook system, you should still have the trade as an open trade and be sitting on a profit of 140%.

On the 14th of Feb TPM signaled a 52 week high. It was bought the following Monday. The price dipped but is still an open trade as per the sell rules.

An option to buy the 2nd position (or it could be the first) was signalled and the trade was bought on Monday 2nd March 2020

There is another example below of the stock BRG, the dip buy bought on 2nd March 2020
